

ADITYA ADEP

DevOps Engineer | AWS Cloud Infrastructure | CI/CD & Kubernetes

+91 7798906009 | adepaditya1@gmail.com | linkedin.com/in/aditya-ade-971b9b167 | adityaade-971b9b167.github.io

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 4+ years of experience owning production infrastructure end-to-end on AWS and Linux, progressing from pipeline automation to full infrastructure ownership across two enterprise environments. Design of CI/CD pipelines, Infrastructure as Code (Terraform, CloudFormation, Ansible), and Kubernetes workloads (EKS/ECS), while partnering with development, QA, and security teams to drive release strategy. Builds resilient AWS networking (VPC, Transit Gateway, Site-to-Site VPN) connecting on-prem and cloud environments, and champions DevSecOps, observability (Prometheus, Grafana, Loki), and cost/performance optimization — cutting cloud spend, accelerating release velocity, and sustaining 99.9%+ uptime for mission-critical financial and enterprise applications.

CORE TECHNICAL SKILLS

Operating Systems: Linux (Ubuntu/RHEL/CentOS) administration, shell scripting, systemd, performance tuning, hardening

AWS Cloud: Route 53, EC2, ALB/NLB, Auto Scaling (ASG), API Gateway, Lambda, RDS, S3, SQS, SNS, IAM, CloudWatch, EBS, VPC, Transit Gateway, NAT Gateway, Site-to-Site VPN, VPC Endpoints

Containers & Orchestration: Docker, Docker Compose, Kubernetes, Amazon EKS, Amazon ECS, Helm, ConfigMaps/Secrets

Infrastructure as Code & Config Management: Terraform, AWS CloudFormation, Ansible

CI/CD & DevSecOps: Jenkins, GitHub Actions, ArgoCD, Maven, SonarQube, Fortify, pre-build/post-build security scanning, Nexus/Artifactory, GitOps

Monitoring & Observability: Prometheus, Grafana, Loki, Node Exporter, CloudWatch, centralized logging & alerting

Networking: VPC design, subnetting, routing tables, Transit Gateway, Site-to-Site VPN tunnels, NAT Gateway, hybrid on-prem/cloud connectivity, TLS 1.3, NGINX reverse proxy, managed public and private DNS records, domains, and routing policies using Route 53.

Scripting & Automation: Python, Bash/Shell, Infrastructure automation, Git, Bitbucket

Practices: Incident Management (L3 support), RCA documentation, Cost Optimization, Release Management, Developer/QA Support

PROFESSIONAL EXPERIENCE

DevOps Engineer

Ventura Securities Ltd

Nov 2024 - Present

Thane, Mumbai

- High Availability & Linux Administration:** Owned and administered production Ubuntu Linux servers, tuning system performance and hardening security to sustain 99.9% uptime for critical trading applications.
- AWS Cloud & Networking:** Architected and administered EC2-centric AWS infrastructure spanning ALB, Auto Scaling Groups, RDS, API Gateway, Lambda, SQS, and SNS; designed VPC networking with Transit Gateway and Site-to-Site VPN tunnels to unify on-prem and cloud connectivity, and configured NAT Gateways and routing for secure, reliable traffic flow.
- Containerization & Orchestration:** Deployed containerized microservices using Docker and Kubernetes manifests (Deployments, Services, ConfigMaps), managing environment-specific releases via Helm charts on Amazon EKS/ECS, cutting manual deployment steps by 80% and improving release consistency across 12+ services.
- Infrastructure as Code:** Provisioned AWS infrastructure using Terraform and CloudFormation, and standardized server configuration with Ansible, cutting environment provisioning time from 4 hours to 15 minutes and eliminating 90% of manual configuration errors.
- CI/CD Pipeline Engineering:** Built production-grade, end-to-end CI/CD pipelines using Jenkins and GitHub Actions covering build, pre-build and post-build security scanning, and SonarQube quality gates, taking release deployment from fully manual to zero-touch and cutting release turnaround time from 3 hours to 10 minutes.
- Security & Reverse Proxy:** Configured and maintained NGINX reverse proxies with TLS 1.3 encryption, securing traffic routing across multiple critical production services.
- Monitoring & Observability:** Stood up centralized logging, Alerting and monitoring using Prometheus, Grafana, Loki, and Node Exporter, improving system visibility and cutting troubleshooting time by 50%.
- Cost Optimization & Performance:** Conducted cloud resource audits and rolled out VPC endpoints, right-sizing, and scaling optimizations that lowered data transfer costs and slashed overall AWS spend by 50%.

- **Production Support & Incident Management:** Provided L3 production support, proactively troubleshooting infrastructure bottlenecks to restore services with minimal downtime, and partnered with development and QA teams to ensure smooth, reliable releases.
- **Automation:** Streamlined complex infrastructure and daily operational tasks using Python and Shell scripting, saving 10+ engineering hours weekly.

DevOps Engineer

Jul 2022 – Sep 2024

BNP Paribas India Solutions Pvt. Ltd

Mumbai

- **CI/CD & Process Automation:** Engineered robust Jenkins pipelines from scratch using Maven, accelerating developer release velocity by 35% and reclaiming 6+ engineering hours weekly through self-service Python/Bash infrastructure scripts.
- **DevSecOps & Security Enforcement:** Spearheaded pipeline security by embedding SonarQube quality gates and Fortify static analysis scans at pre-build and post-build stages, eliminating 98% of critical vulnerabilities before deployment across 40+ microservices.
- **Container & Artifact Optimization:** Authored multi-stage Dockerfiles that shrank container image sizes by 60%, while maintaining 5,000+ dependencies within Nexus/Artifactory at 99.9% availability.
- **Git Governance & Version Control:** Orchestrated Git and Bitbucket branching strategy for 35+ engineers, establishing strict GitFlow policies that cut code integration conflicts by 45%.
- **Incident Management & RCA:** Led L3 production incident replication and system log analysis, authoring detailed Root Cause Analysis (RCA) documentation that reduced MTTR by 40%.
- **Developer & QA Enablement:** Supported development and testing teams throughout the release cycle, coordinating deployments and environment readiness for smooth, on-schedule releases.

KEY PROJECT

Ventura Retail Trading Platform

Jan 2026 – Mar 2026

Ventura Securities Ltd

- **Secure Traffic Engineering:** Configured high-performance NGINX reverse proxies with TLS 1.3 to safely route 10M+ daily high-frequency financial transactions, reducing handshake latency by 25%.
- **Proactive Observability:** Engineered a centralized observability network using Prometheus and Grafana with critical threshold alerts, preemptively mitigating 92% of server performance bottlenecks before user impact.
- **High-Availability Deployment:** Oversaw resilient CI/CD pipelines to sustain 99.99% uptime and true zero-downtime rolling deployments for the core retail trading application ecosystem.
- **Runtime Optimization:** Structured containerized application runtimes with secure multi-stage Dockerfiles, cutting average image sizes by 55% and accelerating pipeline build speeds by 12 minutes.

EDUCATION

Master of Computer Applications (Computer Science)

Jan 2022

Bharati Vidyapeeth's Institute of Management and Information Technology, Navi Mumbai — GPA: 9.33/10.00

Bachelor of Science in Computer Science

University of Mumbai — GPA: 9.08/10.00

CERTIFICATIONS

- AWS Cloud Solutions Architect — Coursera (Jan 2024)
- DevOps on AWS — Coursera (Jan 2024)
- The Joy of Computing using Python — NPTEL (Jan 2021)

AWARDS & SCHOLARSHIPS

- BNP Stellar Award, Andromeda (Jan 2023) — Recognized for outstanding contribution to DevOps automation and reliability initiatives.
- TFWS Scholarship Seat — awarded based on MHT-CET ranking.
